SUMMARY

Software Engineer Intern with 6 months of hands-on industry experience building and maintaining production web applications. Skilled in React, TypeScript, Supabase, Java, Spring Boot, and the MERN stack, with hands-on experience in RESTful APIs, secure authentication, and SQL and NoSQL databases. Experienced working in Agile teams, using Git for version control, and fixing real-world issues in live systems. Seeking a Junior/Associate Software Engineer role to build scalable, reliable software.

WORK EXPERIENCE

Inivac (Pvt) Ltd (6 months) Apr 2026 – Oct 2026

Software Engineer Intern

- Contributed to Grand Pearl ERP, a production hotel and resort system used daily by staff to manage bookings, restaurant orders, events, inventory, and reports.
- Built and enhanced features in React and TypeScript, including multi-room bookings, invoices, payments, discounts, and paginated, filterable views.
- Worked with Supabase (PostgreSQL) for data, authentication, and role-based access with Row Level Security, including approval workflows for sensitive operations.
- Tested, debugged, and fixed issues reported from live usage, collaborating with the team using Git and code reviews in an Agile environment.

EDUCATION

Bachelor of Science Honors in Computer Science & Technology (Aug 2022 - 2026)

Uva Wellassa University of Sri Lanka

Related Coursework: Object-Oriented Programming, Advanced Programming Techniques, Data Structures & Analysis of Algorithms, Software Engineering, Software Architecture & Design Patterns, Database Management Systems, Advanced Database Management Systems, Web Application Development, Cloud Computing, Operating Systems Concepts, Advanced Computer Networks, Data & Network Security, System Analysis & Design, Software Quality Assurance, Rapid Application Development, and Data Warehousing & Data Mining.

PROJECTS

Grand Pearl ERP | Hotel & Resort Management System (Professional Project at Inivac)

- **React, TypeScript, Supabase, PostgreSQL, Tailwind CSS**
  - Built and maintained core ERP modules in React and TypeScript, including bookings, restaurant orders and KOTs, events, pool bookings, inventory, and invoices.
  - Developed dashboards, reports, and the Staff Service Share module with date-range filters, search, and pagination.
  - Implemented a maker-checker approval workflow with Supabase RLS, server-side role checks, and realtime updates with a pending-approval alarm.

Handmade Jewellery Try-On & Customization Platform | Full-Stack Web Application

- **Spring Boot,React, Tailwind CSS, PostgreSQL, JWT Auth, PayHere API, AI Integration**
  - Designed and developed a full-stack web application for Wave Mirissa, a local handcrafted jewellery brand.
  - Built secure authentication, product/order management, delivery tracking, and role-based admin dashboard.
  - Implemented AI virtual try-on and personalized recommendations based on face shape and skin tone.

E-Commerce Platform | Full-Stack Web Application

- **MongoDB, Express.js, React, Node.js, JWT, Stripe API, Tailwind CSS**
  - Built a MERN stack e-commerce platform with secure authentication and payment processing.
  - Implemented JWT authentication, account management, cart, orders, and real-time tracking.
  - Developed an admin dashboard for product CRUD, revenue analytics, order monitoring, and real-time customer updates.

Hotel Management System | Full-Stack Web Application

- **MongoDB, Express.js, React, Node.js, Stripe API, Tailwind CSS**
  - Built a hotel management platform for user registration, hotel exploration, availability checks, and secure bookings.
  - Implemented user dashboard with booking history, payment details, and real-time reservation updates.
  - Created an owner dashboard for room management, booking monitoring, and analytics.

TECHNICAL SKILLS

Java | **JavaScript** | **Python** | **TypeScript**

Spring Boot | **Node.js** | **Next.js** | **React** | **Supabase** | **Tailwind CSS**

MySQL | **MongoDB** | **PostgreSQL**

Git | **JWT** | **REST APIs** | **Stripe API** | **PayHere API**

RESEARCH

Multivariate Anomaly Detection Using Machine Learning and Image Processing for Early Wildfire Detection in Wildfire-Prone Regions (Ongoing)

- **Machine Learning, Computer Vision, Time-Series Analysis**
  - Implemented LSTM models to detect environmental anomalies such as heatwaves and dry conditions from multivariate climatic data.
  - Built Vision Transformer (ViT) models for wildfire stage classification (pre-fire, active fire, no-fire) using multispectral satellite imagery.
  - Enhanced wildfire early-warning accuracy by correlating climatic anomalies with wildfire occurrences and fusing numerical and visual data for risk assessment.

SOFT SKILLS

- **Problem Solving**
- **Team Collaboration**
- **Effective Communication**
- **Time Management**
- **Quick Learner**
